RCRA 1976 – Energy Goal & Objective

• RCRA -42 U.S. Code § 6902 - Objectives and national policy
• Objective “The objectives of this chapter are to promote the protection of health and the environment and to conserve valuable material and energy resources by”… “providing technical and financial assistance to State and local governments and interstate agencies for the development of solid waste management plans (including resource recovery and resource conservation systems) which will promote improved solid waste management techniques (including more effective organizational arrangements), new and improved methods of collection, separation, and recovery of solid waste, and the environmentally safe disposal of non-recoverable residues;”
• “The Congress finds with respect to materials, that …millions of tons of recoverable material which could be used are needlessly buried each year” and that “the recovery and conservation of such materials can reduce the dependence of the United States on foreign resources and reduce the deficit in its balance of payments.”
CCP Resource Recovery

• Coal Ash History Meets The Goal of RCRA- Best Resource Recovery Story - “Untold”

• 2014 Data - 129.7M Ton Produced; 62.4M Ton Utilized – 48%

• Resource Produced For Construction
  – Sand & Gravel - 914 Million Ton (up 7.5%%)
  – Cement - 89.1 Million Ton (up 9.1%)
  – Gypsum - 33.7 Million Ton (up 4.7%)
  – CCPs - 129.7 Million Ton (up 13% due to Scrubbers)
CCR Resource Impacts

• Regulatory Climate & E&P Tech Have Rapidly Changed The CCR Resource Markets

• Focus Today Is On Regulatory Impacts
  – MATS, MACT, CCR, ELG, CPP Etc.
  – 2015 & 2016 Hard Hit Years On Plant Closings
  – 60 GW Reduction By EOY 2016
  – 19.6 GW Announced For Shutdown by 2025
  – Compliance Costs & Methods Indirectly Reduce Ash Quality & Resource Recovery
Capacity Reductions Impact CCRs

- Total 310 GW Current Capacity
- 48-60 GW Closing - Primary MATS & MACT
  - Capacity Factor <45%
  - Units < 200MW
  - Av Age 54 Yr
  - Most w/o SO2 Controls
- Announced Unit Closing - 19.6 GW - CCR & ELG Regulation – Ash Volume 5M TPY Reduction

Source: EIA Annual Energy Outlook 2014 Reference Case and Annual Electric Generator Report
CCP Production & Use History

- CCP Production 129.6 MM Ton - Fly Ash, Bottom Ash & FGD
- Fly Ash & Bottom Ash Production Down - FGD Production Up
- Utilization Rebounding After Regulatory Clarity - Subtitle D
- EPA Support For Fly Ash In Concrete & Gypsum In Wallboard

SOURCE: American Coal Ash Association Production and Use Survey
CCP - Cost Control Value

Utilization of CCPs has increased during recessions, but dropped during a period of regulatory uncertainty.

Figure 2. Regulatory uncertainty led to a decline in CCP markets

SOURCE: ARTBA CCP Production and Use Historical Analysis, 2015
Economic Impacts & Uses

- CCP Value - $6-$14B/Year
- CCPs – 3%-New Home Costs- <1/2 $$ Of Replaced
- Cement-$80-$110
- Fly Ash- $20-$90
- Gypsum - $5-$35
- Life-cycle Costs Decrease w/ CCPs
- Highway Concrete Lifespan Extension
- Ready Mixed Concrete
- Wallboard
- Roofing Shingles
- Carpet Backing
- Lightweight Plastics
- Lightweight Aggregates
- Agriculture Sulfur Source
- Oil & Gas Drilling
Fly Ash Production & Use

- 2014 Fly Ash Use In Concrete – 13.1 M Ton vs. 12.3 M Ton (6.5% Inc)
Bottom Ash Resource Use

- **De-icing Skid Control**
  - Salt Replacement
  - $5-$15 vs $50-$70

- **Bottom Ash LWA**
  - Processed to replace LWA
  - Typical Block - 35 – 38 lb
  - Bottom Ash LWA Block – 28-32 lb
  - Product priced in $15-$30/t
  - Replaced product - $30-$50/t
  - Avoids Mine Operation
  - Avoids Kiln Operation
  - Avoids Disposal
Gypsum Utilization

• Wallboard Manufacture
  ➢ 50% Of Production
  ➢ $1-$10/Ton

• Cement Manufacture
  ➢ 5% Added to All Cement S
  ➢ Set Control
  ➢ $1-$10/Ton

• Agriculture Application
  ➢ Sulfur Nutrient Defficiency
  ➢ Crops Consume 16-18 lb/ac
  ➢ 90% Purity vs Mined @ 70-80%
  ➢ $15-$35/Ton
Half of Wallboard Manufactured in US Utilized Recovered CCP Gypsum
2015 Projected CCP Production

- Coal Remains ~30% Fuel Mix – Announced Closings Equate To 5M TPY
- Production Volume & Reclaimed CCPs Offer Resources For Needs
- Certain Markets Impacted By Loss Of Plants Or CCP Quality

**Figure 3.** CCP production will increase 0.3 percent annually as coal demand for electric generation remains steady.

*SOURCE: ARTBA CCP Production and Use Historical Analysis, 2015*
Summary Impacts On CCP

• Coal Use Will Be Impacted By Cheap Natural Gas (Capacity Factor) & Regulatory Impacts (Closures)

• CCP Use As A Valued Resource Continues
  – Volumes Impacted In Certain Markets
  – Quality Impacted By Regulation
  – Beneficiation Technologies Applied To Reclaim
  – Reclaim Of Impoundment & Landfill Ash Ensures Long Term Availability With Beneficiation
  – Transportation Longer Distances Required
  – At 30% Of Fuel Mix – Volumes Meet Demands

**Notes:**
These are estimates for entire U.S. utility and IPP sectors calculated by dividing the survey respondents data by the portion of the overall industries coal burn they represent, as reported in the July 2015 EIA Electric Power Monthly (58%).
