1.2016 | Resolution Supporting the Deployment of Advanced, Innovative Electric Transmission Technology

WHEREAS, a secure, reliable and resilient power grid integrating generation resources serves as a foundation of a growing economy and is critical to our national security; and

WHEREAS, regulators, policy-makers, and consumers expect generating resources and the grid to perform extremely reliably; and

WHEREAS, a significant portion of the nation’s transmission facilities are aged and will require a replacement strategy; and

WHEREAS, environmental regulations, State renewable energy portfolio standards, State and federal tax policies, other economic factors, and technology developments are causing some electric generation resources to retire, while replacement generation, some of it fueled by intermittent resources, is being sited at other locations on the electric grid; and

WHEREAS, new innovative cost-effective transmission technologies (including, but not limited to, high-capacity/high-efficiency conductors, and compact transmission towers) are commercially available that can increase grid capacity, improve energy transfers, promote greater stability and resiliency, make more efficient use of rights-of-way, reduce transmission line losses, and help to streamline siting and construction activities; and

WHEREAS, new and advanced replacement transmission facilities can be designed to enable a wide variety of new generating resources and can address technical, environmental and aesthetic issues that might impede or limit the development and operation of these resources; and

WHEREAS, crowded utility corridors often allow little room for expansion; and

WHEREAS, the Joint Committee on Energy of the state of Arkansas adopted Interim Resolution 2015-004 establishing a policy that encourages utility project developers to incorporate advanced transmission line technologies in projects and for regulators and grid operators to compare their cost-effectiveness to conventional technologies when they are proposed in projects; and

WHEREAS, the policies of the National Association of Regulatory Utility Commissioners, the Southern Legislative Conference representing 15 states and the Midwest Legislative Conference representing 11 states and four Canadian provinces recognize the benefits of these technologies to modernize the grid and improve generating resource integration and encourages electric utilities, grid operators and state public service commissions to consider the cost-effective use of these technologies.

THEREFORE BE IT RESOLVED, that the Southern States Energy Board encourages state legislatures and public service commissions to support utility efforts to: 1) investigate and consider new advanced transmission technologies when replacing aged transmission infrastructure; 2) evaluate new transmission technologies to determine whether they can cost effectively ensure the continued reliable delivery of electricity while providing greater capacity
and enhanced efficiency; 3) consider the ability of these technologies to reduce environmental and visual impacts to communities; and 4) consider the ability of these and other technologies to reduce the overall cost of energy delivery; and

BE IT FURTHER RESOLVED, that the Southern States Energy Board encourages state legislatures and public service commissions to work with Regional Transmission Organizations/Independent System Operators and other planning authorities to support and encourage consideration of those cost-effective advanced electric transmission infrastructure options that can increase grid capacity, reduce transmission line losses, improve energy transfers, make efficient use of rights-of-way, improve energy efficiency and help to streamline siting and construction activities in their planning, evaluation and oversight of transmission grid development, especially by utilizing existing transmission corridors; and

BE IT FURTHER RESOLVED, that the Southern States Energy Board encourages state legislatures and public service commissions to include in their oversight of transmission facilities the consideration and promotion of the appropriate use of advanced electric transmission technologies in support of their interest in the continued provision of affordable, reliable electricity to consumers.

The Southern States Energy Board requests that a copy of this policy position be forwarded to the governors, lieutenant governors, applicable state and regional regulators including but not limited to public service commissioners, energy department directors, regional transmission operators and legislative presiding officers and energy committee chairs of the members states.
